OBJECTIVE

To leverage my skills in **Python**, web frameworks (**Django/FastAPI**), and **AI/ML** technologies to build scalable and intelligent applications. I aim to develop efficient backend systems, integrate machine learning models, and create data-driven solutions that solve real-world problems while contributing to innovation and business growth.

EXPERIENCE

AI Developer Intern

Capsdata | Infopark, Kochi

Dec/2025 - Mar/2026

- Worked on a **live production project at Pickadspace.com** [🔗](#), contributing to the **Pickadspace Vision** by developing computer vision solutions and AI-based visual analysis features.
- Worked as an **AI Developer Intern** focusing on computer vision and model training.
- fine-tuned **YOLO-based object detection models** for real-world vision use cases.
- **Developed and implemented new features to improve people counting accuracy**, optimizing YOLO-based detection models and OpenCV pipelines for reliable real-time analytics.
- Performed **data preprocessing, annotation, and augmentation** to improve model accuracy and performance.
- Assisted in **deploying trained models** for real-time and batch inference workflows.
- Worked with **OpenCV (including OpenCV DNN), PyTorch, and Python** for developing and optimizing computer vision models.
- Developed **Python GUI applications using PyQt5** for AI-based tools and interfaces.
- Used **Windows Security features and Win32API** for secure and system-level application integration.

PROJECTS

AI Retail Analytics System

- Developed a real-time AI analytics system using FastAPI, YOLOv8x, and InsightFace to detect and count cars, bikes, and people, and to estimate visitors' age and gender.
- Generated actionable insights such as peak arrival times and majority age groups to help malls and retail stores optimize sales, marketing, and staffing decisions.

House Price Prediction [🔗](#)

- Designed a prediction system using Machine Learning models like KNN, Multiple Linear Regression, Linear Regression, and Logistic Regression.
- Built and deployed the model using scikit-learn, pandas, and a Flask web interface.

Natural Language Processing [🔗](#)

- Developed an NLP pipeline using TF-IDF, Bag of Words, tokenization, lemmatization, stop-word removal, NER, and text preprocessing with spaCy and NLTK.
- Enhanced text classification and analysis by optimizing logical expressions and implementing efficient preprocessing workflows in Python.

Hospital Management [🔗](#)

- Built a hospital management system using Next.js (frontend) and Django REST Framework (backend) with PostgreSQL for secure data storage.
- Integrated Gemini API and Razorpay, implemented appointment management and prescription scheduling, and used Gemini API to predict diseases. Added secure role-based access for admins, doctors, and patients.

Feedback Analyzer (Sentiment Analysis)

- Integrated an automated sentiment analysis system in the E-Commerce website to analyze customer reviews and classify them as Positive, Negative, or Neutral, enabling admins to improve customer satisfaction and product quality.

Amazon prime clone

- Developed a full-stack streaming platform using Django, HTML, CSS, JavaScript, and Bootstrap with Razorpay integration for secure subscription payments.
- Built a responsive interface for streaming movies and web series, similar to an Amazon Prime-style platform.

Blog Web Application

- Created a dynamic blogging platform using Django and JavaScript for easy content publishing and management.
- Implemented CI/CD with Jenkins and Docker to automate testing, building, and deployment.

SKILLS

Frontend

HTML, CSS, JavaScript, Next.js, React.js

Programming

Python, Java, SQL, HTML, CSS, JavaScript

NLP (Natural Language Processing)

Text Preprocessing, regex, Tokenization, Stemming/
Lemmatization, Bag of Words, TF-IDF, Sentiment
Analysis, NLTK & SpaCy

Framework

Django, RESTful API, FastAPI, PyTorch

Machine Learning

Regression, Classification, Clustering, Decision
Trees, Random Forest, SVM, KNN

Libraries

NumPy, Pandas, Scikit-learn, OpenCV, PyQt5

EDUCATION

Master of Computer Applications

Marian College Kuttikanam

sgpa : 7.8

2024 – 2026

Idukki, Kerala, India

Bachelor of Computer Applications

St Antony's College Peruvanthanam

63%

2020 – 2023

Idukki, Kerala, India

CERTIFICATIONS

- Data Analysis with Python By IBM
- Machine Learning with Python By IBM
- RedHat System Administration (rh134)
- SQL and Relational Databases 101

ACHIEVEMENTS

Coordinated an industrial visit for 56 students and managed the entire day activities.

Managed IoT projects, guiding students from hardware selection to successful prototype completion.

LANGUAGES

English

Working Proficiency

Tamil

Native Language

Malayalam
